KeraStat® Gel: Barrier Hydrogel for Moist Wound Environment.

KeraStat® Gel is a sterile, non-implantable, keratin-based hydrogel wound dressing intended to act as a protective covering in the management of a variety of partial thickness dermal wounds. When applied, KeraStat® Gel covers the wound and facilitates a moist wound environment for the management of partial thickness wounds.

KeraStat® Gel: Indications for Use.

KeraStat® Gel is intended to provide a moist environment and absorb excess wound exudate. KeraStat® Gel is indicated for management of a number of partial thickness skin wounds such as:

- Partial thickness (first and second degree) burns
- Severe sunburns
- Superficial injuries, cuts, abrasions, and incisions / surgical wounds

Under the direction of a healthcare practitioner, KeraStat® Gel also may be used in the management of dry, light, and moderately exuding partial thickness wounds including:

- Pressure (stage I-II) ulcers
- Venous stasis ulcers, ulcers caused by mixed vascular etiologies
- Diabetic ulcers
- Donor sites and grafts

Available in 5ml tubes.

Benefits of KeraStat® Gel

- Conforms to any wound surface without excessive manipulation
- Remains on the wound surface following topical application
- Easily removed if necessary, during debridement
- Capable of providing a barrier to provide a moist wound environment
- Non-irritating, non-sensitizing, non-pyrogenic
